

Challenge Details

Using Vue.js create a full stack web application within 1 github repo.

For the web application, recreate this portion of www.remoteroofing.com (screenshot below)

The web application should ping an API that you create to get autocomplete data shown below

The autocomplete data can be fake data from the API you created or you can use the google autocomplete (<https://developers.google.com/places/web-service/autocomplete>) to create the autocomplete functionality

Requirements

Your web application will be evaluated on the following items:

- How well create is your CSS? Your web application should be at least 90% similar to the screenshot shown
- Did you ensure it is mobile responsive and looks good on phones?
- How well is the code organized? Your code should be easy to read and structured well

Completion

Once completed, please email the following items below to steven@remoteroofing.com, also cc in the email nathan@remoteroofing.com, sandeep@remoteroofing.com

- your resume and/or your linkedin profile link
- your completed challenge github url
- a short video demonstration of what you've created (you can a free software like <https://www.loom.com/> to create this)
